1	Minkowski Spacetime	1
1.1	Introduction	1
1.2	The Four Dimensions	2
1.2.1	Spacetime as an Affine Space	2
1.2.2	A Few Notations	3
1.2.3	Affine Coordinate System	4
1.2.4	Constant c	4
1.2.5	Newtonian Spacetime	5
1.3	Metric Tensor	6
1.3.1	Scalar Product on Spacetime	7
1.3.2	Matrix of the Metric Tensor	9
1.3.3	Orthonormal Bases	10
1.3.4	Classification of Vectors with Respect to \mathbf{g}	11
1.3.5	Norm of a Vector	11
1.3.6	Spacetime Diagrams	12
1.4	Null Cone and Time Arrow	15
1.4.1	Definitions	15
1.4.2	Two Useful Lemmas	15
1.4.3	Classification of Unit Vectors	16
1.5	Spacetime Orientation	19
1.6	Vector / Linear Form Duality	21
1.6.1	Linear Forms and Dual Space	21
1.6.2	Metric Duality	22
1.7	Minkowski Spacetime	23
1.8	Before Going Further.....	26
2	Worldlines and Proper Time	29
2.1	Introduction	29
2.2	Worldline of a Particle	29
2.3	Proper Time	31
2.3.1	Definition	31

2.3.2	Ideal Clock	34
2.4	Four-Velocity and Four-Acceleration	35
2.4.1	Four-Velocity	35
2.4.2	Four-Acceleration	37
2.5	Photons	39
2.5.1	Null Geodesics	39
2.5.2	Light Cone	40
2.6	Langevin's Traveller and Twin Paradox	40
2.6.1	Twins' Worldlines	41
2.6.2	Proper Time of each Twin	43
2.6.3	The "Paradox"	44
2.6.4	4-Velocity and 4-Acceleration	46
2.6.5	A Round Trip to the Galactic Centre	50
2.6.6	Experimental Verifications	53
2.7	Geometrical Properties of a Worldline	56
2.7.1	Timelike Geodesics	56
2.7.2	Vector Field along a Worldline	57
2.7.3	Curvature and Torsions	58
3	Observers	63
3.1	Introduction	63
3.2	Simultaneity and Measure of Time	64
3.2.1	The Problem	64
3.2.2	Einstein-Poincaré Simultaneity	65
3.2.3	Local Rest Space	66
3.2.4	Nonexistence of Absolute Time	69
3.2.5	Orthogonal Projector onto the Local Rest Space	70
3.2.6	Euclidean Character of the Local Rest Space	73
3.3	Measuring Spatial Distances	73
3.3.1	Synge Formula	74
3.3.2	Born's Rigidity Criterion	75
3.4	Local Frame	77
3.4.1	Local Frame of an Observer	77
3.4.2	Coordinates with Respect to an Observer	79
3.4.3	Reference Space of an Observer	81
3.5	Four-Rotation of a Local Frame	82
3.5.1	Variation of the Local Frame along the Worldline	82
3.5.2	Orthogonal Decomposition of Antisymmetric Bilinear Forms	84
3.5.3	Application to the Variation of the Local Frame	87
3.5.4	Inertial Observers	90
3.6	Derivative of a Vector Field along a Worldline	91
3.6.1	Absolute Derivative	91
3.6.2	Derivative with Respect to an Observer	91
3.6.3	Fermi-Walker Derivative	92
3.7	Locality of an Observer's Frame	93

4	Kinematics 1: Motion with Respect to an Observer	97
4.1	Introduction	97
4.2	Lorentz Factor	98
4.2.1	Definition	98
4.2.2	Expression in Terms of the 4-Velocity and the 4-Acceleration	101
4.2.3	Time Dilation	103
4.3	Velocity Relative to an Observer	104
4.3.1	Definition	104
4.3.2	4-Velocity and Lorentz Factor in Terms of the Velocity	106
4.3.3	Maximum Relative Velocity	109
4.3.4	Component Expressions	110
4.4	Experimental Verifications of Time Dilation	111
4.4.1	Atmospheric Muons	111
4.4.2	Other Tests	113
4.5	Acceleration Relative to an Observer	113
4.5.1	Definition	113
4.5.2	Relation to the Second Derivative of the Position Vector	114
4.5.3	Expression of the 4-acceleration	117
4.6	Photon Motion	121
4.6.1	Propagation Direction of a Photon	121
4.6.2	Velocity of Light	122
4.6.3	Experimental Tests of the Invariance of the Velocity of Light	125
5	Kinematics 2: Change of Observer	133
5.1	Introduction	133
5.2	Relations between Two Observers	133
5.2.1	Reciprocity of the Relative Velocity	134
5.2.2	Length Contraction	136
5.3	Law of Velocity Composition	139
5.3.1	General Form	139
5.3.2	Decomposition in Parallel and Transverse Parts	141
5.3.3	Collinear Velocities	144
5.3.4	Alternative Formula	145
5.3.5	Experimental Verification: Fizeau Experiment	146
5.4	Law of Acceleration Composition	148
5.5	Doppler Effect	150
5.5.1	Derivation	151
5.5.2	Experimental Verifications	153
5.6	Aberration	154
5.6.1	Theoretical Expression	155
5.6.2	Distortion of the Celestial Sphere	158
5.6.3	Experimental Verifications	158
5.7	Images of Moving Objects	160
5.7.1	Image and Instantaneous Position	160
5.7.2	Apparent Rotation	161

5.7.3	Image of a Sphere	163
5.7.4	Superluminal Motions	166
6	Lorentz Group	169
6.1	Introduction	169
6.2	Lorentz Transformations	169
6.2.1	Definition and characterization	169
6.2.2	Lorentz Group	171
6.2.3	Properties of Lorentz Transformations	172
6.3	Subgroups of $O(3,1)$	174
6.3.1	Proper Lorentz Group $SO(3,1)$	174
6.3.2	Orthochronous Lorentz Group	175
6.3.3	Restricted Lorentz Group	176
6.3.4	Reduction of the Lorentz Group to $SO_0(3,1)$	176
6.4	Classification of Restricted Lorentz Transformations	178
6.4.1	Invariant Null Direction	178
6.4.2	Decomposition with Respect to an Invariant Null Direction	179
6.4.3	Spatial Rotations	183
6.4.4	Lorentz Boosts	185
6.4.5	Null Rotations	187
6.4.6	Four-Screws	189
6.4.7	Eigenvectors of a Restricted Lorentz Transformation	190
6.4.8	Summary	191
6.5	Polar Decomposition	193
6.5.1	Statement and Demonstration	193
6.5.2	Explicit Forms	194
6.6	Properties of Lorentz Boosts	196
6.6.1	Kinematical Interpretation	196
6.6.2	Expression in a General Basis	198
6.6.3	Rapidity	199
6.6.4	Eigenvalues	202
6.7	Composition of Boosts and Thomas Rotation	204
6.7.1	Coplanar Boosts	204
6.7.2	Thomas Rotation	206
6.7.3	Thomas Rotation Angle	212
6.7.4	Conclusion	215
7	Lorentz Group as a Lie Group	217
7.1	Introduction	217
7.2	Lie Group Structure	217
7.2.1	Definitions	217
7.2.2	Dimension of the Lorentz group	219
7.2.3	Topology of the Lorentz group	220
7.3	Generators and Lie algebra	221
7.3.1	Infinitesimal Lorentz Transformations	221

7.3.2	Structure of Lie Algebra	222
7.3.3	Generators	224
7.3.4	Link with the Variation of a Local Frame	227
7.4	Reduction of $O(3,1)$ to its Lie Algebra	228
7.4.1	Exponential Map	228
7.4.2	Generation of Lorentz Boosts	230
7.4.3	Generation of Spatial Rotations	232
7.4.4	Structure Constants	233
7.5	Relations between the Lorentz Group and $SL(2,C)$	236
7.5.1	Spinor Map	236
7.5.2	The Spinor Map from $SU(2)$ to $SO(3)$	241
7.5.3	The Spinor Map and Lorentz Boosts	245
7.5.4	Covering of the Restricted Lorentz Group by $SL(2,C)$	246
7.5.5	Existence of Null Eigenvectors	248
7.5.6	Lie Algebra of $SL(2,C)$	249
7.5.7	Exponential Map on $sl(2,C)$	252
8	Inertial Observers and Poincaré Group	255
8.1	Introduction	255
8.2	Characterization of Inertial Observers	255
8.2.1	Definition	255
8.2.2	Worldline	257
8.2.3	Globality of the Local Rest Space	257
8.2.4	Rigid Array of Inertial Observers	259
8.3	Poincaré Group	260
8.3.1	Change of Inertial Coordinates	260
8.3.2	Active Poincaré Transformations	261
8.3.3	Group Structure	263
8.3.4	The Poincaré Group as a Lie Group	264
9	Energy and Momentum	269
9.1	Introduction	269
9.2	Four-Momentum, Mass and Energy	270
9.2.1	Four-Momentum and Mass of a Particle	270
9.2.2	Energy and Momentum Relative to an Observer	271
9.2.3	Case of a Massive Particle	274
9.2.4	Energy and Momentum of a Photon	278
9.2.5	Relation between P , E and the Relative Velocity	279
9.2.6	Components of the 4-Momentum	279
9.3	Conservation of 4-Momentum	280
9.3.1	4-Momentum of a Particle System	280
9.3.2	Isolated System and Particle Collisions	282
9.3.3	Principle of 4-Momentum Conservation	283
9.3.4	Application to an Isolated Particle: Law of Inertia	284
9.3.5	4-Momentum of an Isolated System	286

9.3.6	Energy and Linear Momentum of a System	289
9.3.7	Application: Doppler Effect	290
9.4	Particle Collisions	291
9.4.1	Localized Interactions	291
9.4.2	Collision between Two Particles	292
9.4.3	Elastic Collision	293
9.4.4	Compton Effect	298
9.4.5	Inverse Compton Scattering	300
9.4.6	Inelastic Collisions	303
9.5	Four-Force	308
9.5.1	Definition	308
9.5.2	Orthogonal Decomposition of the 4-Force	309
9.5.3	Force Measured by an Observer	310
9.5.4	Relativistic Version of Newton's Second Law	312
9.5.5	Evolution of Energy	313
9.5.6	Expression of the 4-Force	314
10	Angular Momentum	315
10.1	Introduction	315
10.2	Angular Momentum of a Particle	316
10.2.1	Definition	316
10.2.2	Angular Momentum Vector Relative to an Observer	317
10.2.3	Components of the Angular Momentum	319
10.3	Angular Momentum of a System	319
10.3.1	Definition	319
10.3.2	Change of Origin	320
10.3.3	Angular Momentum Vector and Mass-Energy Dipole Moment	321
10.4	Conservation of Angular Momentum	322
10.4.1	Principle of Angular Momentum Conservation	322
10.4.2	Angular Momentum of an Isolated System	323
10.4.3	Conservation of the Angular Momentum Vector Relative to an Inertial Observer	324
10.5	Centre of Inertia and Spin	325
10.5.1	Centroid of a System	325
10.5.2	Centre of Inertia of an Isolated System	326
10.5.3	Spin of an Isolated System	329
10.5.4	König Theorem	330
10.5.5	Minimal Size of a System with Spin	331
10.6	Angular Momentum Evolution	334
10.6.1	Four-Torque	334
10.6.2	Evolution of the Angular Momentum Vector	335
10.7	Particle with spin	337
10.7.1	Definition	337
10.7.2	Spin Evolution	340

10.7.3	Free Gyroscope	341
10.7.4	BMT Equation	342
11	Principle of Least Action	345
11.1	Introduction	345
11.2	Principle of Least Action for a Particle	345
11.2.1	Reminder of Non-Relativistic Lagrangian Mechanics	345
11.2.2	Relativistic Generalization	346
11.2.3	Lagrangian and Action for a Particle	347
11.2.4	Principle of Least Action	348
11.2.5	Action of a Free Particle	350
11.2.6	Particle in a Vector Field	352
11.2.7	Other Examples of Lagrangians	354
11.3	Noether Theorem	355
11.3.1	Noether Theorem for a Particle	356
11.3.2	Application to a Free Particle	357
11.4	Hamiltonian Formulation	360
11.4.1	Reminder of Non-Relativistic Hamiltonian Mechanics	360
11.4.2	Generalized Four-Momentum of a Relativistic Particle	364
11.4.3	Hamiltonian of a Relativistic Particle	365
11.5	Systems of Particles	368
11.5.1	Principle of Least Action	369
11.5.2	Hamiltonian Formulation	372
12	Accelerated Observers	373
12.1	Introduction	373
12.2	Uniformly Accelerated Observer	373
12.2.1	Definition	373
12.2.2	Worldline	375
12.2.3	Change of the Reference Inertial Observer	378
12.2.4	Motion Perceived by the Inertial Observer	379
12.2.5	Local Rest Spaces	381
12.2.6	Rindler Horizon	382
12.2.7	Local Frame of the Uniformly Accelerated Observer	384
12.3	Difference between the Local Rest Space and the Simultaneity Hypersurface	388
12.3.1	Case of a Generic Observer	388
12.3.2	Case of a Uniformly Accelerated Observer	390
12.4	Physics in an Accelerated Frame	391
12.4.1	Clock Synchronization	391
12.4.2	4-Acceleration of Comoving Observers	394
12.4.3	Rigid Ruler in Accelerated Motion	395
12.4.4	Photon Trajectories	398
12.4.5	Spectral Shift	400
12.4.6	Motion of Free Particles	402

12.5	Thomas Precession	405
12.5.1	Derivation	405
12.5.2	Application to a Gyroscope	410
12.5.3	Gyroscope in Circular Orbit	411
12.5.4	Thomas Equation	412
13	Rotating Observers	417
13.1	Introduction	417
13.2	Rotation Velocity	417
13.2.1	Physical Realization of a Nonrotating Observer	418
13.2.2	Measurement of the Rotation Velocity	419
13.3	Rotating Disk	420
13.3.1	Uniformly Rotating Observer	420
13.3.2	Corotating Observers	422
13.3.3	4-Acceleration and 4-Rotation of the Corotating Observer	423
13.3.4	Simultaneity for a Corotating Observer	426
13.4	Clock Desynchronization	430
13.4.1	Introduction	430
13.4.2	Local Synchronization	431
13.4.3	Impossibility of a Global Synchronization	432
13.4.4	Clock Transport on the Rotating Disk	436
13.4.5	Experimental Measures of the Desynchronization	440
13.5	Ehrenfest Paradox	442
13.5.1	Circumference of the Rotating Disk	442
13.5.2	Disk Radius	443
13.5.3	The “Paradox”	444
13.5.4	Setting the Disk into Rotation	445
13.6	Sagnac Effect	448
13.6.1	Sagnac Delay	449
13.6.2	Alternative Derivation	451
13.6.3	Proper Travelling Time for each Signal	453
13.6.4	Optical Sagnac Interferometer	454
13.6.5	Matter-Wave Sagnac Interferometer	457
13.6.6	Application: Gyrometers	459
14	Tensors and Alternate Forms	461
14.1	Introduction	461
14.2	Tensors: Definition and Examples	462
14.2.1	Definition	462
14.2.2	Tensors already Met	462
14.3	Operations on Tensors	463
14.3.1	Tensor Product	463
14.3.2	Components in a Vector Basis	464
14.3.3	Change of Basis	465
14.3.4	Components and Metric Duality	467

14.3.5	Contraction	468
14.4	Alternate Forms	468
14.4.1	Definition and Examples	468
14.4.2	Exterior Product	470
14.4.3	Basis of the Space of p -Forms	472
14.4.4	Components of the Levi-Civita Tensor	472
14.5	Hodge Duality	474
14.5.1	Tensors Associated to the Levi-Civita Tensor	475
14.5.2	Hodge Star	477
14.5.3	Hodge Star and Exterior Product	479
14.5.4	Orthogonal Decomposition of 2-Forms	479
15	Fields on Spacetime	481
15.1	Introduction	481
15.2	Arbitrary Coordinates on Spacetime	481
15.2.1	Coordinate System	481
15.2.2	Coordinate Basis	482
15.2.3	Components of the Metric Tensor	484
15.3	Tensor Fields	488
15.3.1	Definitions	488
15.3.2	Scalar Field and Gradient	489
15.3.3	Gradients of Coordinates	490
15.4	Covariant Derivative	491
15.4.1	Covariant Derivative of a Vector	491
15.4.2	Generalization to all Tensors	492
15.4.3	Connection Coefficients	493
15.4.4	Christoffel Symbols	495
15.4.5	Divergence of a Vector Field	497
15.4.6	Divergence of a Tensor Field	498
15.5	Differential Forms	499
15.5.1	Definition	499
15.5.2	Exterior Derivative	499
15.5.3	Properties of the Exterior Derivative	502
15.5.4	Expansion with Respect to a Coordinate System	502
15.5.5	Exterior Derivative of a 3-Form and Divergence of a Vector Field	504
16	Integration in Spacetime	507
16.1	Introduction	507
16.2	Integration over a 4-Dimensional Volume	507
16.2.1	Volume Element	507
16.2.2	Four-Volume of a Part of Spacetime	508
16.2.3	Integral of a Differential 4-Form	509
16.3	Submanifolds of \mathcal{E}	510
16.3.1	Definition of a Submanifold	511

16.3.2	Submanifold with Boundary	512
16.3.3	Orientation of a Submanifold	513
16.4	Integration on a Submanifold of \mathcal{E}	514
16.4.1	Integral of any Differential Form	514
16.4.2	Volume Element of a Hypersurface	516
16.4.3	Area Element of a Surface	518
16.4.4	Length Element of a Curve	520
16.4.5	Integral of a Scalar Field on a Submanifold	521
16.4.6	Integral of a Tensor Field	522
16.4.7	Flux Integrals	522
16.5	Stokes' Theorem	523
16.5.1	Statement and Examples	524
16.5.2	Applications	526

21.2.1	Energy-Momentum Tensor	650
21.2.2	Quantities Relative to an Arbitrary Observer	652
21.2.3	Pressureless Fluid (Dust)	653
21.2.4	Equation of State and Thermodynamic Relations	654
21.2.5	Simple Fluids	656
21.3	Baryon Number Conservation	658
21.3.1	Baryon Four-Current	658
21.3.2	Principle of Baryon Number Conservation	659
21.3.3	Expression with Respect to an Inertial Observer	661
21.4	Energy-Momentum Conservation	662
21.4.1	Introduction	662
21.4.2	Projection onto the Fluid 4-Velocity	662
21.4.3	Part Orthogonal to the Fluid 4-Velocity	664
21.4.4	Evolution of the Fluid Energy Relative to some Observer	664
21.4.5	Relativistic Euler Equation	665
21.4.6	Speed of Sound	667
21.4.7	Relativistic Hydrodynamics as a System of Conservation Laws	668
21.5	Formulation Based on Exterior Calculus	669
21.5.1	Equation of Motion	669
21.5.2	Vorticity of a Simple Fluid	670
21.5.3	Canonical Form of the Equation of Motion	671
21.5.4	Non-Relativistic Limit: Crocco Equation	673
21.6	Conservation Laws	675
21.6.1	Bernoulli's Theorem	675
21.6.2	Irrotational Flow	677
21.6.3	Kelvin's Circulation Theorem	679
21.7	Applications	682
21.7.1	Astrophysics: Jets and Gamma-Ray Bursts	682
21.7.2	Quark-Gluon Plasma at RHIC and at LHC	683
21.8	To Go Further...	690

22	What about Relativistic Gravitation?	691
22.1	Introduction	691
22.2	Gravitation in Minkowski Spacetime	692
22.2.1	Nordström's Scalar Theory	692
22.2.2	Incompatibility with Observations	698
22.2.3	Vector Theory	700
22.2.4	Tensor Theory	701
22.3	Equivalence Principle	702
22.3.1	The Principle	702
22.3.2	Gravitational Redshift and Incompatibility with the Minkowski Metric	704
22.3.3	Experimental Verifications of the Gravitational Redshift ...	705
22.3.4	Light Deflection	708
22.4	General Relativity	708
